ORINTA FILATOVA

Senior Java Engineer · Spring Boot, Kafka, AI / LLM integration

Belgrade, Serbia (CET) · orinta.filatova@gmail.com · Telegram @oorinta · oriinta.github.io · github.com/Oriinta

Summary

Senior backend engineer with 5+ years in fintech (Raiffeisen Bank, Tinkoff, Central Bank of Russia): FX-rate calculation and conversion, trading-risk controls, market-data aggregation. Java 21, Spring Boot, Kafka, PostgreSQL, Kubernetes. Since 2025 I have co-founded two AI products and built them end to end: Spring AI backend, RAG and embeddings, an MCP server, LLM evaluation on golden sets, agentic development with Claude Code. Earlier, 6 years in product and analytics (P&G, Nielsen), so I can take a vague business problem to a spec and a measured result without a PM in between.

Experience

Co-founder & Product Engineer · Fraiven (fraiven.com) · Apr 2026 – present

- Built a social leisure PWA from first commit to production in 4 weeks: Java 21 / Spring Boot + Spring AI backend, Next.js front end, PostgreSQL, Docker, CI/CD; Google / Telegram auth, web push, GA4; agentic workflow in Claude Code (plan → implement → review, hooks as quality gates). Weekly users grew 5.8× in 7 weeks.
- AI layer: RAG and embedding search over a 900+ item catalogue collected by parsers and enriched / translated into 3 languages by LLMs at ingestion; a Python MCP server exposing catalogue search as tools for AI agents.
- Offline evaluation on a hand-labelled golden set: switching from category- to item-level embedding matching raised recall from 38% to 96% at 96% precision, with zero false exclusions of anti-interests.

Co-founder & Engineer · Eliryn (eliryn.world), non-profit · Jul 2025 – Apr 2026

- AI coaching games (Telegram bot → SEO web app): scripted flows with an LLM router that classifies each answer via structured outputs and decides when to move on; shared sessions across Telegram and web, subscriptions with auto-renewal, RU / EN. Idea to production in 6 weeks; game completion rose from 15% to 73%.

Senior Java Developer · Raiffeisen Bank · Jan 2023 – Jul 2025

- Trading-risk platform for B2B deals (Java 21, Spring Boot, Kafka, PostgreSQL, Kubernetes, GitLab CI): built the online limit-utilisation service, per client across settlement, derivative and money-market deals, recalculated on every deal event; batch loading cut the calculation from 8 s to 500 ms, moving the check from after-the-fact to online.
- Built the market-conformity (price verification) service: each deal's price is compared with a volume-weighted order-book quote at deal time and checked against configurable thresholds; deals and quotes stream over Kafka, quotes sit in daily Postgres partitions, and rules are filter expressions parsed with an ANTLR grammar, so risk managers add checks without a release.
- Automated the manual market-data checks (securities and benchmark rates, SOFR / ESTR / EFFR) with Prometheus alerts, cutting ~1 hour of daily work to incidents only; proposed a hot/cold storage split running 3+ years without incidents; started the team's architecture reviews; mentored senior developers.

Senior Java Developer & de-facto delivery manager · Tinkoff · May 2022 – Jan 2023

- FX-conversion platform (6 microservices, 100+ operations/s): built automated control against rate gaming that prices conversion cycles with live client rates, detects exploitable cross-rate cycles, restores a correct rate and alerts the team; built after a ~$7M cross-rate incident.
- Rates and spreads by client group, rollout of new currencies; owned every production release of the team for several months: planning, rollout safety, incident response.

Java Developer · Central Bank of Russia · Dec 2020 – Mar 2022

- 15+ microservices (Java, Spring, Kafka, PostgreSQL, Oracle, Camunda) automating regulated processes with credit organisations; cut a key query from ~6 s to 150 ms by removing an N+1 pattern; internal tooling adopted by the whole team (SFTP test client, data-cleanup service, auto-restart of failed inbound packages); earlier at Ramax Group wrote an ANTLR parser for 20+ IATA aircraft message types.

Earlier: Product Manager / Analytics Team Lead · Nielsen, Eksmo, P&G · 2013 – 2019

- Marketing-mix modelling for PepsiCo, J&J, Ferrero with regression validation and C-level presentations; launched a product line from zero to 200,000+ items sold; led a P&G launch to 105% of target.

Skills

Backend: Java 21 · Spring Boot / Data / Security / AOP · Spring AI · Kafka · PostgreSQL · Oracle · REST · microservices · Camunda / BPMN · ANTLR

AI: LLM APIs · RAG · embeddings · MCP servers · prompt pipelines · structured outputs · golden-set evaluation (precision / recall) · n8n

Agentic development: Claude Code · plan–implement–review with hooks as quality gates · context engineering

Infra & delivery: Docker · Kubernetes · GitLab CI / Jenkins · Prometheus / Micrometer · release & incident management · Python · Next.js / React (working level)

Education & languages

HSE University — MSc Strategic Marketing (2015), BSc Management (2013) · Russian (native) · English (C1) · Serbian (A2)
